Hospital Bed Weighing Scales

MHS are high precision digital bed scales which allow bedridden patients to be simply and accurately weighed with no or little disturbance. These bed scales are used primarily in hospitals for weighing acute stroke and other patients. Wired (MHS) and wireless (MHSW) models are available.

The main features of the MHS(W) Scales are:

- Suits any bed size
- High capacity
  500kg x 0.2kg / 1100lb x 0.5lb
- Portable trolley design
- Wireless range between controller and the weighing pads up to 10m / 30 feet
- Powered by rechargeable batteries and/or AC/DC power adapter / charger
- Simple to setup and use, little effort required to roll bed casters on the 4 weighing pads
- Weighing units: kilograms (kg) and pounds (lb)
- Weight of each bed type could be stored in the memory and recalled when needed
- Tare (weigh of the bed) could be entered via keypad before or when the bed is on the scale
- Light weight 4 weighing pads
- Easy to read large 0.8”/ 20 mm 7- segment red LED display
- LED annunciators provide indication of the weighing status
- Made in Canada
- Warranty 1 year
